Online Bakery

Contents

1. Introduction

The goal of the project is to build a website to order bakery items online. Customers can order items either by logging in as a member or as guest.

Admin will be having the authority to fix the price, to post items, quantity and highlights about the item.

2. Registration:

Using Sign Up, Admin can register for a login using his employee id. Employee id and password to be used while logging in.

Validation should happen to check the password and confirm password matches.

First Name	Alphabets Only. Mandatory Field
Last Name	Alphabets Only. Mandatory Field
Employee ID	Numbers Only. Mandatory Field
Password	Alphanumeric
Confirm Password	Alphanumeric

3. Admin Login

User will be having Login option, and on login, user should be shown with employee id and password to login.

Before Login, Admin will still have the option to browse the items, menus and add it to the cart and order items as guest.

To add price, new items, delete item user needs to login using Admin Credential. Screen will look like this before login

After Admin Logs in, he should be having option to edit the item name, delete an item and to add new items. Login Menu should be changed to Logout.

On clicking ok, recently made changes should get updated. Admin can logout using logout button

Add New Item will enable user to upload picture, add description and provide the quantities available.

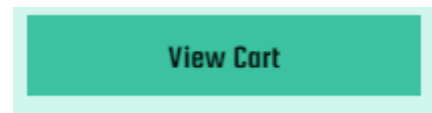

4. Customer Guest Order

Customer will be able to add items to cart without login. When the user clicks on Add, count should get increased and amount should be calculated.

Minus symbol to reduce the quantity.

On clicking Add to Cart, cart should get updated with the items selected. Add to Cart button should get changed to "View Cart"

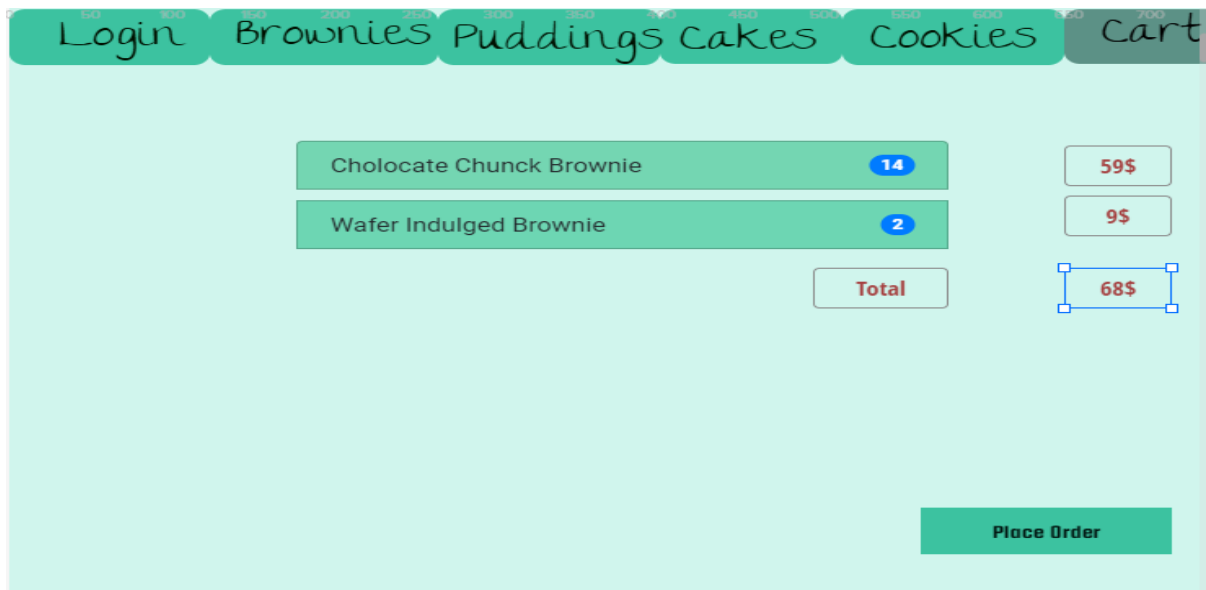

The same options and functionalities are applicable for other Item Menus as well.

5. View Cart

User will be taken to Cart Screen either by clicking "View Cart" or by clicking "Cart "Menu.

Cart Menu Page will be like the one shown below. On clicking Place Order, user should be taken to Payment Screen.

6. Placing Order

Place order should land the user in "Details "Screen. Field Level validation should be as below.

First Name	Alphabets Only. Mandatory Field
